About Me

DevOps Engineer with Nearly 4 years of experience designing and managing scalable cloud infrastructure and automated CI/CD pipelines. Proficient in Kubernetes, Docker, Terraform, and AWS, with strong expertise in container orchestration, infrastructure as code, and cloud-native architectures. Focused on improving system reliability, deployment efficiency, and high-availability production environments.

Skills

Cloud Platforms	Containerization & Orchestration	Monitoring & Observability	Infrastructure as Code
- AWS (Amazon Web Services) - GCP (Google Cloud Platform)	- Docker - Kubernetes / EKS - Karpenter - KEDA - Amazon ECS	- Prometheus - Grafana - Datadog	- Terraform - Helm
CI/CD & GitOps	Security & Secrets	Databases	DevOps Practices
- CI/CD Pipelines - Bitbucket Pipelines - ArgoCD	- AWS IAM - AWS Secrets Manager - WAF	- MongoDB - Amazon RDS (PostgreSQL) - Elastic Cache	- Cost Optimization - Bash Scripting
			Operating Systems
			- Linux - Ubuntu

Work Experience

DEVOPS ENGINEER – IDEA CLAN PVT LTD.

SEPT 25–PRESENT

- Managed microservices on Amazon EKS using Helm charts and Argo CD, following GitOps practices for reliable and consistent deployments.
- Managed Kubernetes clusters at scale across **120+ EKS nodes and 1,500+ pods** using GitOps-driven workflows with Helm and Argo CD.
- Implemented a **Microfrontend architecture** using Amazon S3, Amazon CloudFront, and Terraform, enabling independent development and deployment of frontend microservices.
- Implemented monitoring and observability solutions using Prometheus and Grafana, enhancing system reliability and reducing incident response time.
- Optimized CI/CD pipelines, reducing deployment time by 35% through Docker multi-stage builds, layer caching, and efficient image pull policies.
- Implemented KEDA autoscaling based on RabbitMQ queues and cron to dynamically scale workloads and downscale non production environment during non-working hours help **30% cost reduction in cloud Cost**.
- Designed and deployed a highly available, secure AWS infrastructure for a "Dazz" (dancing) application using Terraform and Terragrunt, including a custom VPC, security groups, and an EKS cluster to ensure scalable container orchestration.
- Managed daily deployments of Kubernetes Pod services and individual Pods based on developer requirements.

THIRD UNICORN PVT LTD – CHANDIGARH

OCT-2023 – SEPT 2025

Third Unicorn is an early-stage, multi-product technology startup founded by prominent Indian entrepreneur **Ashneer Grover**. The name suggests it is Grover's third major venture, following BharatPe and his earlier roles.

- Built **Crickpe** and **Zerope** from scratch on AWS, leveraging ECS, VPC, CodePipeline, S3, Route 53 and CloudFront. Implemented monitoring with Datadog/New Relic, Grafana managed deployments via blue/green strategy to ensure a robust, secure infrastructure.
- Developed a CI/CD pipeline using Bitbucket, and AWS Code Pipeline to improve software delivery.
- Migrated MongoDB to EC2 with minimal downtime for data transition on Stage Environment which help to save DB cost.
- Migrated infrastructure from AWS to GCP, reducing operational costs by 30%.
- Leveraged Kubernetes, Docker, KEDA, Helm, ArgoCD, Prometheus, and Grafana to automate workflows, optimize resource scaling, and ensure high system uptime.

- Implemented automated daily backups for Amazon RDS (PostgreSQL) containing loan records, repayments, and user profiles
- Collaborated with cross-functional teams and participated in regular stand-ups and strategy meetings to ensure alignment and maintain a smooth workflow.

INNOVATIVE-E-SOLUTION ENTERPRISE - PANCHKULA

OCT-22 - APRIL 2023

- Experienced in managing DNS services like Route 53 and Azure DNS for reliable domain resolution.
- Skilled in using AWS services (CloudFront, CloudTrail, CloudWatch, Lambda) to optimize cloud infrastructure.
- Ensured cloud security best practices (IAM roles, security groups, WAF, SSL)
- Managed cloud services like EC2, S3, RDS, and ELB to enhance performance.
- Gained in-depth knowledge of multiple cloud platforms including AWS, Google Cloud, and Azure.

Education

(2015 - 2019)

KURUKSHETRA UNIVERSITY

**BACHELOR OF TECHNOLOGY IN
COMPUTER SCIENCE
ENGINEERING :- 71 %**

(2013 - 2014)

SUNSHINE PUBLIC SCHOOL

SENIOR SECONDARY SCHOOL :- 65%

(2011- 2012)

TAGORE PUBLIC SCHOOL

SECONDARY SCHOOL :- 8.2 CGPA

Projects

Lookfinity :- <https://lookfinity.com/>

Lookfinity is a data-driven MarTech platform that automates media buying and campaign management across TikTok, Google, and Facebook from a unified dashboard using Python, Node.js, React, and MongoDB.

Dazz :- <https://thedazz.io/>

Dazz is an online dance platform where users can learn various dance styles from the comfort of home.

Zerope:- <https://www.zerope.care/>

Loan Application Platform (Up to ₹5 Lakh Medical/Personal Loans).

Crickpe:- <https://crickpe-fantasy-cricket-app.en.softonic.com/android>

Crickpe was a fantasy cricket application that allows cricket lovers to create their own virtual teams and win prizes.
